### **SPECIFICATION**

A marked-up copy of the changes to selected paragraph(s) is provided below.  
Please enter these changes to the specification in the record.

Paragraph at page 8, lines 1-12.

Still referring to Figure 1, the bag bed plate 104 includes, in one embodiment, a curved end 104a. In another embodiment, the end 104a may simply be straight or other configuration, none of which are limiting features of the invention. The curved end 104a, though, may facilitate the packaging and drop off of the formed package, itself. A clamping, cutting and serrate mechanism 110 is also provided. Additionally, a roller or bar-type structure 112 is positioned near a top surface of the bag forming mechanism 102 at a state of operation. The structure 112 directs wrapping "W" from a wrapping supply roll 114 to the packaging mechanism ~~110~~ 100. A tub or container "C" is used to hold the sequenced product "P". The container "C" makes no part of the present invention, and is shown for illustrative purposes.
